ANSWERS TO QUESTIONS RECEIVED THROUGH 2:00 P.M. ON MARCH 1, 2022:

Q#2 Is previous subsurface data (i.e., historic boring logs, geotech reports/recommendations) available for the two planned full bridge replacement locations, or should we assume geotechnical services will be necessary?

A#2 There is subsurface data available for both full bridge replacement locations including borings and foundation information. We would expect this information to be used and then possibly supplemented by additional investigation, if necessary. As always, an economical approach is expected. Existing geotechnical data was provided in Addendum No. 1.

Q#3 Please clarify if the organizational chart and additional resumes must be kept to a two-page limit. Given that the total length of the proposal is 12 pages, it would be very helpful not to limit the org chart and resume section to two-pages. Please consider removing the limit on organizational chart and resumes.

A#3 The resumes must be kept to a two page limit. The organizational chart is not included in this limit.

Q#4 Can you please confirm that ODOT prequalification is required for protective coating inspection for this design project?

A#4 ODOT prequalification for protective coating inspection is not required for this project.

Q#5 Is it acceptable to bring on sub-disciplines not explicitly listed in the RFP, e.g., geotechnical, environmental, etc. if the consultant sees value to the project(s)?

A#5 It is acceptable to add sub-disciplines to the consultant's proposal where appropriate.

Q#6 The RFP states: "Provide references from three organizations other than the Ohio Turnpike and Infrastructure Commission for similar projects and services completed in the past three years. Is it acceptable to provide references from three different ODOT districts as "three organizations other than OTIC?"

A#6 It is acceptable to provide references from three different ODOT districts although this will not be viewed as being as complete as providing references from three distinct organizations.

END OF ADDENDUM NO. 2
